

CAREPLUS™ WIRELESS SMART CALL POINTS

CarePlus™ Wireless Smart Call Points is a targeted, forward-thinking interface for significantly improved quality care coordination and management. The multifunctional, cable free Smart Call Points are scalable wall mount units with a large, braille push button for customised usage in various patient and staff stations. Different colour and label options are available to provide diverse priorities and alarms for 100% accuracy. Wireless Call Points have maximum flexibility, offering freedom of location compared to expensive and sometimes difficult cabling. Broad area coverage with CarePlus™ Wireless is leveraged through LPWAN (Low Power Wireless Area Network). LPWAN utilises RF 920 MHz in the medical and scientific band with a user-friendly design. This fosters safer environments in hospitals, aged care facilities, mental health facilities, drug and alcohol units, dementia units and day surgery. All CarePlus™ Wireless Smart Call Points have antimicrobial protection and built-in infection control to reduce risk and spread of bacteria, infection and superbugs, such as MRSA. The IP system and Smart Call Points has enhanced real-time wireless communication at reduced commissioning, installation and operating costs.
